The best solution for me is mpd with alsaplayer, but I thought I post some file players. I tested them and also post my favorites here. I created another list for them. These file players are written in c++ and are not light applications. HD Online Player (Arabeem Ottakom P Madhavan Nairum Fu) .Q: Deleting a row from a table I have a table, about 30 rows with over 100 columns in a single table, the only column I'm interested in is "ID" (which is auto incremented) so I want to delete an entire row (without affecting the others). Is that possible? If not, can I try an edit it? A: Actually, you can delete a row, but not because the column is auto incremented. You can do it with mysql but it is very insecure so it is better if you do not do it. In this case you can use php to execute an sql delete statement for a row but not with auto_increment. PS: I used to have something like this in one of my projects but I did not test it. You should search the web regarding this: mysql php

delete Keep in mind that this is dangerous unless you do not execute sql directly on the database and do it only through php. EDIT I did some testing on this, and it does not work but maybe you will be able to develop a solution to this, I did not test it too much. If you want to delete a row in MySQL you need to drop the row, but it can not be done because your column is auto_increment. You need to use a procedure to delete a row, to do it you will need to get all the rows where your id is (if this is unique in your database) and delete them and then you will update your table to be the same as it was before. Searching the web you can find the following code, which I hope you can modify and adapt it to your needs.

```
CREATE DEFINER=`root`@`localhost`  
PROCEDURE `test`() BEGIN DECLARE _id INT;  
SELECT `id` INTO _id FROM `table_name` WHERE  
`id` = 2; DELETE FROM `table_name`
```
